PhoneBuff.com

If you're still desperately reading this article, then your landline problems probably aren't caused by weather. A simple way to determine the source of the noise is to remove each potential suspect one by one until the noise goes away. For instance, disconnect all the other phones to see if that helps. If it doesn't, see if moving the phone line away from other electronics gets rid of the static noise. Another easy way to find the source of your woes is to listen. The type of sound could indicate your problem. For instance, static sounds tend to be caused by cordless sets, answering machines, poor weather and faulty wiring. Buzzing or high-pitched squeals, on the other hand, often result from the high-frequency signals coming from a DSL modem. Sometimes the phone itself and its related equipment are the issue. Here are some steps you can take if you suspect your phone. Find out if all of your house phones suffer from line noise. Sometimes inexpensive or older phones can malfunction and create problems. Make sure the phone cord plugged into the jack is straight, in good condition and no more than 12 feet (3.7 meters) long. The farther the data has to travel, the more likely it is to encounter problems along the way. Try plugging the phone in a different phone jack; sometimes electrical surges damage jacks. Check that the cord is at least 2 feet (0.6 meters) away from other power cords, speaker wires, and other electronics, and remove all other devices from the phone line. Other times, your Internet service may be to blame. If you have a DSL device, make sure you have a good quality DSL line filter on every phone and fax machine, as well as any other device in your home that shares the connection. Sometimes the DSL line filters provided by your Internet service provider aren't effective. You can buy better DSL phone filters for wall phones and other appliances at an electronics store for as little as \$5; ask the salesperson for a recommendation. You can also try purchasing a line noise filter or phone noise filter. These small contraptions plug into your phone and can help to alleviate some noises. Lastly, if you think the source of the noise is a radio transmitter, a filter might help you reduce the interference. [source: ARRL]. If none of the suggestions in this article succeed in clearing your phone line noise, you can always call your telephone company and ask to have the line tested for noise. Many will do it free of charge, and they may be able to help you get to the bottom of your conversation killer. Be sure to tell the phone company if you use the phone line for just voice, or data and voice. As far as other annoying noises — like those family members of yours — you're on your own. For more information about phone line noise and how to clear it, try some of the links on the next page. Noise Reduction Technology for Cell Phones Plenty of people are interested in reducing noise interference on cell phones, too. Newer models come with echo cancellation and other noise-reduction technologies built in. Makers of wireless headsets, such as Plantronics, aggressively market their device's ability to remove the background noise from your very important conversation with digital signal processing technology. Originally Published: Jun 2, 2008 Previous Next Sort by votes please help me... my phone asus zenfone cannot detect my home wifi. i have done everything. reboot it, upgrade the apps and lastly factory hard reset. after i done that, my phone can detect the wifi for a while only. when i open the setting, it only appears "searching for wifi network". i dont know what to do anymore. Try... 1. Check your time and date on the phone to make sure it is correct. 2. a. Clear out the WiFi data on the phone. b. Reboot the modem/router. c. Once the modem/router is fully 'up' again, reboot the phone and re-input the WiFi data. NOTE: Even if the WiFi works for all other things connected to it, it is possible that your one device is more sensitive to changes in the connectivity. It happens all the time. Sometimes the only way to resolve that is to reboot the router/modem. Should none of the above work, then it may be a physical problem with the phone. In that case, if the phone is under warranty still i would contact the manufacturer. If it isn't, then you can take it to someone to fix, or look into a new phone. You must log in or register to reply here. Few things in life are as annoying as finding that your Android handset refuses to install any more app updates because it's run out of storage. Unlike many of life's little annoyances, though, this one's easy to fix. You can't do anything about your system files, but you can quickly clear out precious gigs by sweeping up stale downloads, rooting out offline maps and documents, clearing caches, and wiping unneeded music and video files. And if these tips don't do the trick, check out our picks for the best Android phones for every need and budget. Michael Simon/IDG Clearing out cache won't save a ton of space at once but it will add up. If you dig into the Apps storage setting screen and tap on an individual app, you'll notice that each app has its own stash of "cached" data—anywhere from a few kilobytes to hundreds of megs, or even more. These caches of data are essentially just junk files, and they can be safely deleted to free up storage space. Select the app you want, then the Storage tab and, finally the Clear Cache button to take out the trash. Tame your Chrome browser Michael Simon/IDG Chrome can use up a bit of your phone's space. One of the biggest background abusers of your phone's space is a web browser. Each time you visit a site, it stores a little bit for faster loading, and they can add up over time. To bring things back down to size, open Chrome on your Android phone, tap the menu in the top right corner, and open Settings. Then go to Site Settings and scroll down to Storage. At the bottom of the screen, you'll see a Clear site storage option. Tap it and you might free up a couple of hundred megabytes. Clean up your Downloads Michael Simon/IDG Your phone saves everything you've ever downloaded so you might need to clear it every once in a while. Just like on a PC or a Mac, your Android device has a Downloads folder. You'll find inside the Files app on most phones—though it's called My Files on Galaxy phones—and it's a favorite hideout for miscellaneous junk files downloaded from the web or some other app. When you find it, the three-line menu icon in the top corner of the screen and sort the list of downloads by size, then take a look at what's hogging the most storage space. Then simply tap and hold to select the ones you don't want and trash them. Dump photos that are already backed up One of the best features of Google's Photos app is its ability to back up your entire photo library to your online Google account. Once your snapshots are safely backed up, Photos can zap any locally stored images to free up more space. Open the Photos app, tap the three-line menu button in the top left corner of the screen, then tap Free up space. The Photos app will let you know how many pictures it can delete from local storage and how much space you'll save. Tap OK to pull the trigger. Note: If you're using the "High quality" setting for unlimited but lower-resolution cloud storage of your backed up photos, keep in mind that the "Free up device storage" feature will delete your full-resolution originals. Make sure you've stored them elsewhere before you tap the OK button. Manage downloaded music, movies, and podcasts The biggest space suckers on your Android phone are media files. Those albums that you downloaded for a camping trip or a movie for a long plane ride that you simply forgot about can eat up lots of data. Thankfully they're easy to find and remove. First, head over to the Storage tab in Settings and check the Audio and Video folders to see if there are any files that can be deleted. Michael Simon/IDG The storage manager in Android OreO will help you see exactly what's eating your phone's free space. You'll also find a new "Free up space" button at the top of OreO's storage manager. Tap it and you'll see a list of your downloads and infrequently used apps, as well as an option to clear any photos and videos that have already been backed up to the cloud. It's essentially a shortcut, but it's a handy one. Turn on smart storage OreO includes a new toggle called Smart Storage that can work wonders without needing to do a thing. Flip it on, and your phone will automatically clear out the biggest space-stealing culprit: photos and videos. Michael Simon/IDG Android OreO's Smart Storage can free up space without your needing to lift a finger. Since we all forget to clear out our photo libraries regularly, you can choose to automatically remove backed-up photos and videos after 30, 60, or 90 days, making sure your phone isn't stuffed with duplicate photos. Get an SD card Nearly every Android phone you can buy in 2018 has a slot for expandable storage, so you'll be able to double, triple, and quadruple the space on your phone for just a few bucks. You'll want to get a micro SD card from Samsung or SanDisk in at least 32GB capacity. Prices per gigabyte decrease substantially as the capacity increases, so you should buy the biggest card that you can afford. As a very general rule, around \$0.40 per gigabyte is a good price. Michael Simon/IDG The best way to free up space on your Android phone is to add more of it. Once you select the size you want, installing it is a snap. There's no formatting to worry about, just pop open your SIM card slot and slide in the SD card. Then, you'll be able to shift files and apps onto the card as needed to free up precious internal space. Most phones support SDcards, thought Google's Pixel phones and certain Galaxy phones do not. Take advantage of Google Drive Google gives 15 gigs of free cloud storage with every account, so you might as well use it. Anything inside your Downloads or Files app can be jettisoned to your Google Drive by tapping the menu button in the top right corner and choosing "Send to..." This will open the share sheet, where you can select Save to Drive to choose which folder to add it to. Then you can delete it from your phone without losing it forever. Michael Simon/IDG Your phone comes with 15GB of free space that you might not be utilizing. And if 15 gigs aren't enough, you can upgrade to Google One and increase your storage by an order of magnitude for just a few bucks a month. For just \$1.99 per month, you'll get an extra 100GB of space, and a buck more (\$2.99/month) will double it to 200GB.
