# Inter Part 2

# Physics

# Notes

has been, it is concerned with the question of the best method of measuring the rate of change of the field of the magnetic vector in observation, but the rate of change is not constant, and the vector is not constant in direction.

The rate of change of the field of the magnetic vector is not constant in direction, and the rate of change of the field of the magnetic vector is not constant in magnitude.

The rate of change of the field of the magnetic vector is not constant in direction, and the rate of change of the field of the magnetic vector is not constant in magnitude.

It is not possible to measure the rate of change of the field of the magnetic vector in observation, but the rate of change is not constant, and the vector is not constant in direction.

The rate of change of the field of the magnetic vector is not constant in direction, and the rate of change of the field of the magnetic vector is not constant in magnitude.

The rate of change of the field of the magnetic vector is not constant in direction, and the rate of change of the field of the magnetic vector is not constant in magnitude.

Morphology of Flowering Plants

Tap root system - mustard  
 Fibrous system - wheat, gram, rice  
 Adventitious root - grass, Nerium, Banyan tree

Aerial root - mangrove  
 Stilt root - sugarcane

Regions of the root

Apical meristem  
 Zone of elongation  
 Zone of maturation  
 Root cap

Modifications of root

Tap root for storage  
 ① Turnip - Radish  
 ② Carrot - carrot  
 ③ Mangel - Mangel

④ Stilt root - sugarcane  
 ⑤ Aerial root - mangrove

⑥ Adventitious root - Banyan tree  
 ⑦ Stilt root - sugarcane  
 ⑧ Aerial root - mangrove

⑨ Stilt root - sugarcane  
 ⑩ Aerial root - mangrove

It is not possible to measure the rate of change of the field of the magnetic vector in observation, but the rate of change is not constant, and the vector is not constant in direction.

The rate of change of the field of the magnetic vector is not constant in direction, and the rate of change of the field of the magnetic vector is not constant in magnitude.

The rate of change of the field of the magnetic vector is not constant in direction, and the rate of change of the field of the magnetic vector is not constant in magnitude.

It is not possible to measure the rate of change of the field of the magnetic vector in observation, but the rate of change is not constant, and the vector is not constant in direction.

The rate of change of the field of the magnetic vector is not constant in direction, and the rate of change of the field of the magnetic vector is not constant in magnitude.

The rate of change of the field of the magnetic vector is not constant in direction, and the rate of change of the field of the magnetic vector is not constant in magnitude.
